Application Number: **JP1994000144088**

IPC Class: **C08B 37/08;**

Abstract: **Purpose:** To prepare a solution by dissolving chitosan in a dilute sulfuric acid of a specific concentration, thus isolating the fine particles of chitosan through simplified procedures in no need of expensive reagents.
Constitution: This solution is prepared by dissolving chitosan in dilute sulfuric acid of 0.5-30wt.% concentration. Chitosan is brought into contact with or mixed with the dilute sulfuric acid at least 50°C and a mixture of chitosan with the dilute sulfuric acid is heated up to 50°C to form into a solution. The amount of the sulfuric acid is 0.2-10, preferably 0.8-4 fold molar amount based on the amino groups in chitosan. The concentration of chitosan is 0.5-15wt.% in the dilute sulfuric acid. The solution is cooled down below 50°C to cause precipitation of the fine particles of chitosan.
